## “CLEANING CONCRETE BY STORM”

The “TURBO TWISTER”, is a meticulously engineered cleaning machine, designed and built to cleanse large flat surfaces thoroughly and fast without back strain. Read further to see how the “TURBO TWISTER” replaces the handgun of your pressure washer and turns water into a high-pressure dirt and grime eliminator.

The “TURBO TWISTER” has been designed with a diameter of 36 inches and a height of 25 inches. The “TURBO TWISTER” maneuvers on four 10-inch tubed pneumatic tires with 360 degree pivoting front wheels. It also incorporates a folding handle, and 6.5 hp or larger commercial engine. The rotating union (swivel) seal, is made of long life polished tungsten carbide. The side of the cleaning area is 14-gauge steel for extended service time and safety.

The standard “TURBO TWISTER” unit is encompassed with a rubber skirt, from the left front wheel to the left rear wheel and on to the right rear wheel. Forcing water to project out ahead, and to the right, while moving the “TURBO TWISTER” forward, saves time as it can reduce or eliminate rinsing after cleaning.

Use of an engine is necessary to force the wand toward the work, since the nozzle spray leads the wand by 15 degrees. Wand rotation is held at a constant 1500 rpm regardless of the pressure washer flow and water kickback pressure. An electric motor can replace the engine in areas where exhaust fumes are troublesome.

As the wand turns and the “TURBO TWISTER” moves forward, the spray area is cleaned in both directions (right then left). The spray is positioned to go under the soil rather than wash down through it. The dirt is lifted hydraulically in larger particles speeding the cleaning process leaving a pristine surface.

Hot water is recommended for most applications. Optional zero degree nozzles can be installed to do a first-rate job on extremely difficult contaminants, and usually are used to prepare concrete for sealing. The Turbo Twister cleans on the first sweep. If pinwheel striping occurs, forward travel needs to be reduced.

Some areas require immediate removal of dirty water and its contents. For this purpose, a vacuum pickup option surrounding the base is available. A vacuum capable of moving 300 cubic feet of air per minute or more is recommended. 90% recapture of water and soil speeds up the process of cleaning.

Removing fluid on the go, allows the high-pressure water to hit the surface FULL FORCE. Expect to clean 3000 square feet an hour and more. The “TURBO TWISTER” **CAN AND DOES TAKE RUBBER OFF THE LANDING AREA OF AIRPORT RUNWAYS.**

To request a video showing the “TURBO TWISTER” at work, American Made Cleaners requires your name, street and mailing address, plus phone number.
